18. strand cDNA was primed with a NotI-oligo(dT) primer. Five prime and enriched, double-gerrand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   102

Ist strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoRY sites of the pCMVSPORT 6 vector. Library was not normalized. Library was constructed by Life Technologies, a

                                                                The cDNA encodes human full-length erythropoietin receptor (EPO-R). Primers AAQ82991 and AAQ82992 are used to isolate fragments (nr. 73-750 and 25-250) representing the extracellular domain of the receptor. The fragments are cloned in vector plasmid pGEX-77, resulting in vector pJYL26, which encodes the extracellular domain as a fusion protein with glutathione-S-transferase. The extracellular domain of EPO-R is used for investigating the structure of the EPO-R and for identifying factors involved in regulating differentiation and proliferation mechanisms in erythroid progenitor cells. It can also be used for identifying and quantitating EPO and EPO-R as well as in understanding haematopoietic malignancy and some cardiovascular system disorders. (Updated on 25-WAR-2003 to correct PN field.)

The present invention describes an isolated tumour-associated antigenic target (TAT) nucleic acid comprising: (a) any of 4622 nucleotide sequences (see SEQ ID No:1 to 4622); (b) the full-length coding region of (a); (c) the complement of (a) or (b); (d) a sequence that has 80% composed identity to (a)-(c); or (b) a sequence that hybridises to (a)-(c). Also described: (1) an expression vector comprising the above comprising the above expression vector; (a) a process for producing a polypeptide; (4) an isolated polypeptide comprising the above polypeptide (b) an amino acid sequence encoded by any of the above nucleotide sequences; (b) an amino acid sequence encoded by the full-length coding region of the above nucleotide sequences; (c) a sequence comprising the above polypeptide fused to a heterologous polypeptide (c) an isolated antibody that binds to the above polypeptide; (f) a process of the above polypeptide fused to a heterologous polypeptide; (f) an isolated oligopeptide; (g) a tumour-associated antigenic target (TAT) binding organic molecule; (g) a tumour-associated antigenic target (TAT) binding organic molecule that binds to the above polypeptide; (l) a composition of matter comprising the above polypeptide; (l) a numbody, oligopeptide or TAT binding organic molecule; in combination where the growth of the cell is at least in part dependent upon a growth contributing the growth of a cell that expresses the above protein; (l) a method of determining the provent of the above protein; (l) a method of containing the prosence of a tumour comprising cherapeutically treating a mammal having a cancerous tumour comprising character and described above; (l5) methods of diagnosing the presence of a tumour in a mammal; (l6) a method for treating or preventing a cell proliferative or contained with interested expression or activity of the above protein; (l6) and contained with interested expression or activity of the above protein; (l6) and contained with interesting or preventing or activity of the above protein; (preventing or treating cancer. The composition is also used for preparing a medicament for the therapeutic treatment or diagnostic detection of a cell proliferative disorder or cancer. The present sequence represents a protein; and (17) a method of binding an antibody, oligopeptide or organic molecule to a cell that expresses the protein described above. The TAT sequences have cytostatic activities, and can be used in gene therapy. The composition and methods are useful for diagnosing, New nucleic acid molecule and encoded polypeptide, for diagnosing, preventing or treating cell proliferative disorders such as cancer human TAT cDNA sequence from the present invention. Claim 1; SEQ ID NO 360; 5504pp; English.

benefits from modulating the balance of regulatory T cell function relative to effector T cell function, or vice versa, in a subject. The method involves administering an agent that modulates the expression or activity of a molecule selected from PTGBR2 and TGFbetal, or Jaggad-1, GRR-32, CDB3, CDB4, CDB9, serotonin R, BYS5, serotonin R2C, GPR63, histamine R-H4, GPR59, EPO-R, PSG-1, PSG-3, PSG-6, PSG-9, PDE-4d, and PI-srelated kinase to the subject, such that treatmen occurs. The methods are useful for diagnosing, preventing or treating conditions characterized by a too-vigorous or weak effector T cell or regulatory T cell response to antigens associated with the condition, such as in an allergic response, an autoimmune disorder, a viral infection, such as in an infection, a parasatic infection or a tumour. The present sequence represents a DNA encoding a human erythropoietin receptor (BPOR), preferentially expressed in regulatory T cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GGTGCGGTGCGTTTTCGCTGCTTACAGCCGACACGTCGAGCTTCGTGCCCCTA 360

The present invention relates to diagnosing or monitoring transplant rejection, e.g. cardiac or kidney transplant rejection, in an individual comprises detecting the expression level of one or more genes. The methods, system and kits are useful in diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic felct, lung, bone marrow or stem cell transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic and vanotransplant rejection or method or seem cell transplant rejection, in an individual. The method is also useful in assessing the immune status of an individual. The method are also useful in diagnosing and monitoring diseases that involve the immune system, e.g. rheumatoid arthritis, lupus, inflammatory bowel diseases, multiple sclerosis, HIV/AIDS or viral, bacterial or fungal infection. The present sequence represents a many reference sequence for a 50 mer oligonucleotide marker for diagnosis and monitoring of allograft rejection and other disorders.
                                                                                                                                                              Diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, in an individual, comprises detecting the expression level of

The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and polypeptides; expression vectors and host cells comprising a TAT nucleic acids and polypeptides; expression vectors and host cells comprising a TAT polypeptide; during proteins comprising a TAT polypeptide; during proteins comprising a TAT polypeptide; and methods and compositions for the treatment or diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, antisgonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression particularly cancers such as breast cancer, cancer, parceral cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, cancer, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  137 ArdeAccaccrceasescercerersesceceasescercerrrerererereser 196

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         à
                                                                                                                                                                                                                  The present invention describes a purified human erythropoietin. (BPO)

receptor polypeptide, which consists essentially of amino acids 25-250 of

the full length human BPO receptor protein. The human BPO receptor

polypeptide sapement having an amino terminus and a carboxyl terminus, the

segment having a manio terminus and a carboxyl terminus, the

cepment having a thrombin proteolytic cleavage site at the carboxyl

terminus; and (b) a second polypeptide segment consisting essentially of

the purified human BPO receptor, where the second polypeptide segment is

covalently coupled to the carboxyl terminus of the first polypeptide

segment. The human BPO receptor polypeptide is useful for studying ligand

segment. The bumpan BPO receptor polypeptide is useful for studying ligand

covalently coupled is also useful for amalysing and understanding

receptor. The polypeptide is also useful for analysing and understanding

receptor structure and signal transduction. The present sequence encodes

human BPO receptor from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence encodes a human erythropoietin receptor cDNA (clone 18). Exon boundaries and a base difference with the PCR clone have been determined. The gene product may be used for erythropoietin production or detection, and in production of antibodies for anemia therapy. The human gene has been isolated from a DNA library using a mouse DNA probe. (Updated on 25-MAR-2001 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ATGGACCACCTCGGGGCGTCCCTCTGGCCCCCAGGTCGGCTCCCTTTGTCTCTCCTGCTCGCT 165

The invention relates to a novel isolated NOVX polypeptide. The cardiant, hypotensive, antiarteriosclerotic, virucide, antibacterial, cardiant, hypotensive, antiarteriosclerotic, virucide, antibacterial, tungicide, protozoacide, nootropic, neuroprotective, antiparkingonian, anticonvulsant, osteopathic, antiarthritic, antiinflammatory, anticonvulsant, osteopathic, antiarthritic, antiinflammatory, anticonvulsant, osteopathic, antiarthritic, antiinflammatory, cardiocopathic, antiarthritic, antiinflammatory, anticonvulsant, osteopathic, infections and antibodies may be useful for treating or diagnosing diseases including metabolic disorders such as diabetes and obsisty, infections diseases, ancrexia, cancer, cardiovascular diseases including hypertension and atherosclerosis, neurodegenerative disorders such as Alzheimer's disease, Parkinson's disease and epilepsy, immune disorders, asthma and dyslipidaemia.

Furthermore, the nucleic acids and polypeptides may also be used to disease and epiles may also be used to differentiation and proliferation, haempoiesis, wound healing and angiogenesis, as well as in gene therapy. Finally, the nucleic acids may be used as hypotidisation probes, in chromosome mapping, tissue typing, the human NOV CDNA of the invention.
                                                                                                                                                                        Alsobrook JP, Alvarez E, Anderson DW, Baron M, Boldog FL;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to human NOVX polypeptides and the polynucleotides encoding them. The NOVX polypeptides and polynucleotides are useful for determining the presence of or predisposition to a disease associated with altered levels of the sequences in a mammalian subject, and for treating or preventing a pathology associated with NOVX. The polypeptides, polynucleotides and antibodies that bind immunospecifically to the polypeptides are useful for treating or preventing disorders or syndromes such as congenital heart defects, cardiomyopathy, atherosate and archeroselerosis, hypertension, pulmonary stenosis, scleroderma, adenocarcinoma, haemophilia, graft-versus-host disease, cancer, neurodegenerative disorders, Alzheimer's disease, Parkinson's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Alsobrook JP, Alvarez E, Anderson DW, Baron M, Boldog FL;

Mouse erythroleukaemia (MEL) cells were used to construct a cDNA library. The cDNA was used to transfect COS-1 cells and these were screened for radioiodinated erythropoietin (EPO) binding to isolate cDNA encoding the EPO receptor. This cDNA was used as a probe to screen a human genomic cDNA library to obtain DNA encoding the human EPO receptor. The cDNA may be used to study, treat or diagnose disorders in which the EPO receptor is dysfunctional. See also AAQ53994. (Updated on 25-MAR-2003 to correct PF field.)

Truncated human EpoR; erythropoietin receptor; hypersensitive EpoR(t439); mutant human EpoR; EpoR signalling; cancer; infectious disease; HIV; sickle cell anaemia; cytostatic; antimicrobial; antiviral; immunostimulant; anti-anaemic; se.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present cDNA sequence encodes truncated human EpoR (erythropoietin receptor). This was isolated from human umblical cord blood LDNMC using standard PCR methods. Transfection of constitutively active EpoR(t413) by electroporation into a cytokine-dependent cell line supports cell population expansion in the absence of exogenous cytokines. Mutant human EpoR is used in treatment of disorders related to inadequate EpoR signalling. The transfected cells may also used in gene therapy to treat cancer, infectious diseases (e.g. HIV), sickle cell anaemia, and conditions related to abnormal expression of erythropoietin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          free defined medium useful for the efficient culture of stem cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GGGCCCCCCCCCCCCCCCCCCCCCGGACCCCCAAGTTCGAGAGCCACCC

This was isolated from human mumblical cord blood LDNAC using standard PCR methods. Transfection of constitutively active mutant EpoR (4439) by electroporation into a cytokine-dependent cell line supports cell population expansion in the absence of exogenous cytokines. Mutant human EpoR is used in treatment of disorders related to inadequate EpoR signalling. The transfected cells may also used in gene therapy to treat cancer, infectious diseases (e.g. HIV), sickle cell anaemia, and conditions related to abnormal expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   300

New isolated NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders, e.g. osteoarthritis, obesity, atherosclerosis, cancer, Parkinson's disease, asthma, or infections.

Claim 20; SEQ ID NO 47; 447pp; English.

The invention relates to a novel isolated NOVX polypeptide. The polypeptide of the invention demonstrates, antidiabetic, anorectic, cardiant, hypotensive, antiarteriosclerotic, virucide, antibacterial, fungicide, protozoacide, nootropic, neuroprotective, antiparkinsonlan, anticonvulsant, osteopathic, antiarthritic, antiinflammatory, dermatological, antiasthmatic and antilipaemic activities. The polypeptides, nucleic acid molecules and antibodies may be useful for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
diabetes and obesity, infectious diseases, anorexia, cancer, cardiovascular diseases including hypertension and atherosclerosis, neurodescular diseases including hypertension and atherosclerosis, neurodegenerative disorders such as Alzheimer's disease, Parkinson's disease and epilepsy, immune disorders e.g. osteoarthritis, haemopoietic disorders, inflammatory skin disorders e.g. osteoarthritis, haemopoietic furthermore, the nucleic acids and polypeptides may also be used to identify molecules that modulate or inhibit neurogenesis, cell differentiation and proliferation, haemopoiesis, wound healing and angiogenesis, as well as in gene therapy. Finally, the nucleic acids may be used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine and pharmacogenomics. The current sequence is that of the human NOV cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      900
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         204

New isolated NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders, e.g. osteoarthritis, obesity, atherosclerosis, cancer, Parkinson's disease, asthma, or infections.

Claim 20; SEQ ID NO 49; 447pp; English

The invention relates to a novel isolated NOVX polypeptide. The CC cardiant, hypotensive, antiartes, antidiabetic, anorectic, cardiant, hypotensive, antiarteriosclerotic, virucide, antibacterial, fungicide, protozoacide, noctropic, neuroprotective, antiparkinsonian, anticonvulsant, osteopathic, antiarthritic, antiarilammatory.

Cc dermatological, antiasthmatic and antilipaemic activities. The cc polypeptides, nucleic acid molecules and antibodies may be useful for treating or diagnosing diseases including metabolic disorders such as diabetes and obesity, infectious diseases, anorexia, cancer, cardiovascular diseases including hypertension and atherosclerosis, cardiovascular diseases including hypertension and atherosclerosis, cardiovascular diseases including hypertension and atherosclerosis, cardiovascular diseases including hypertension and adisease, Parkinson's disease and epilepsy, immune disorders e.g. osteoarthritis, haemopoietic disorders, inflammatory skin disorders, asthma and dyslipidaemia.

Cc disorders, inflammatory skin disorders, asthma and dyslipidaemia.

Cc disorders, inclammatory skin disorders, asthma and dyslipidaemia.

Cc disorders, as well as in gene therapy. Finally, the nucleic acids may be used as hybridisation probes, in chromosome mapping, tissue typing, be used as hybridisation probes, in chromosome mapping, tissue typing, creventive medicine and pharmacogenomics. The current sequence is that of the human NOV cDNA of the invention.

BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images include but are not limited to the items checked:

□ BLACK BORDERS
□ IMAGE CUT OFF AT TOP, BOTTOM OR SIDES
□ FADED TEXT OR DRAWING
□ BLURRED OR ILLEGIBLE TEXT OR DRAWING
□ SKEWED/SLANTED IMAGES
□ COLOR OR BLACK AND WHITE PHOTOGRAPHS
□ GRAY SCALE DOCUMENTS
□ LINES OR MARKS ON ORIGINAL DOCUMENT
□ REFERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY

IMAGES ARE BEST AVAILABLE COPY.

□ OTHER: ____

As rescanning these documents will not correct the image problems checked, please do not report these problems to the IFW Image Problem Mailbox.
